

Practical No 1

Aim: Install Selenium IDE; Write a test suite containing minimum 4 test cases for different formats.

Following are the steps for installing Selenium IDE on Mozilla Firefox.

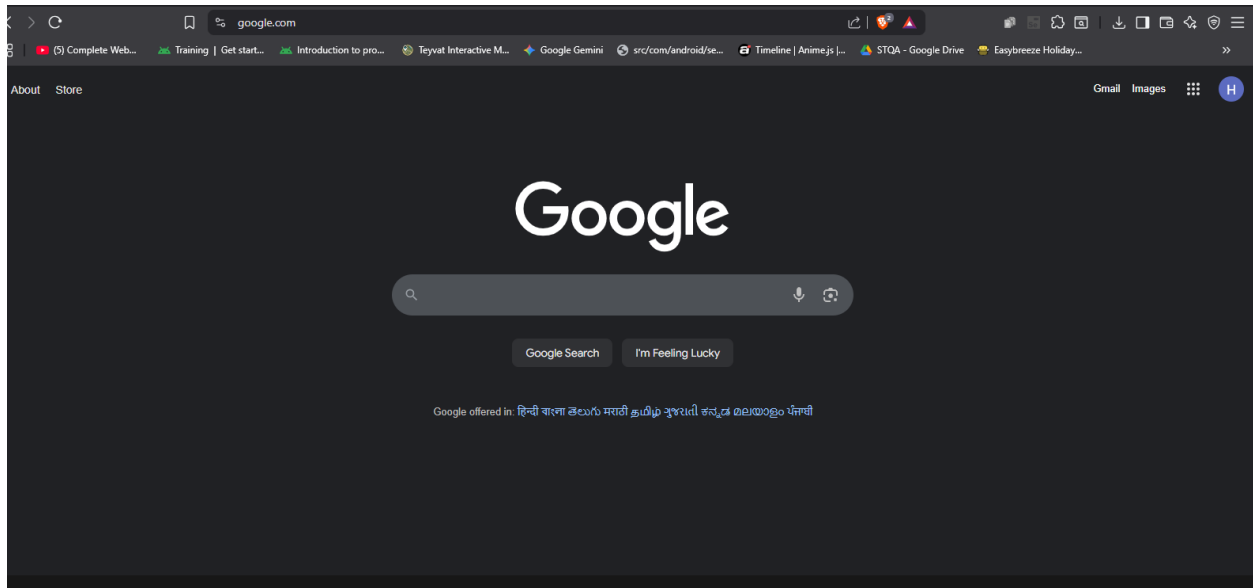

1. Add extension to your browser

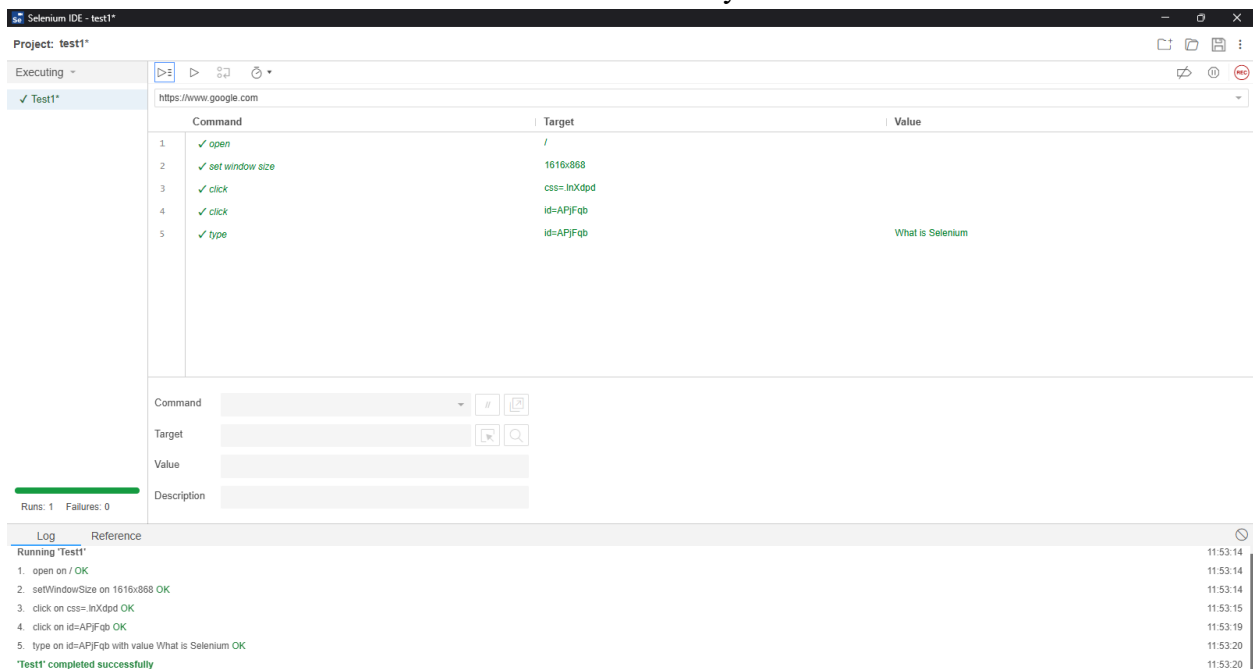

For <https://www.google.com>

Step 1: Open your browser and search for google. Copy and paste the same URL into Selenium IDE, start recording subsequently.

Step 2: Navigate through the google website by choosing options like project route, project timeline etc. And test the website by performing actions such as typing, clicking and dragging. After actions are performed click on Menu below the project name and choose Executing and run all tests. Save the Test Case with a name followed by .side suffix.

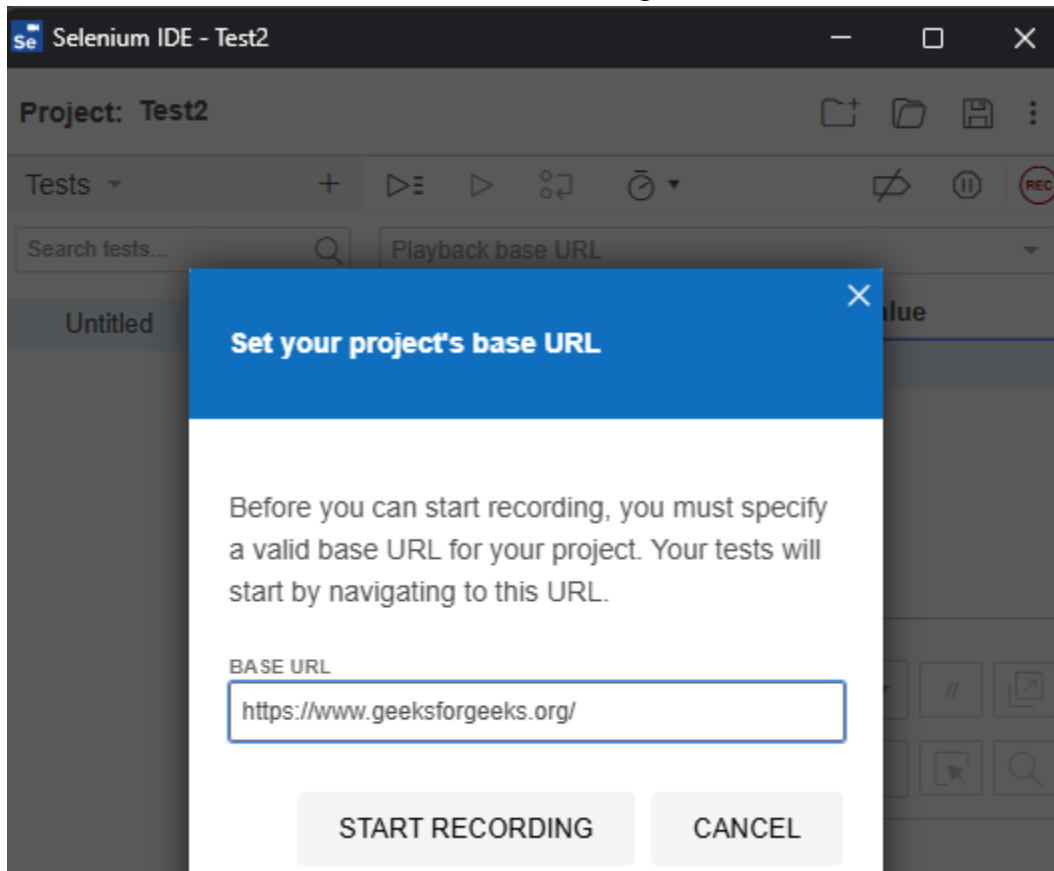

Practical No 2

Aim: Conduct a test suite for 2 different websites using Selenium IDE. Perform various actions like clicking links, filling forms, and verifying content.

For [geeksforgeeks.org](https://www.geeksforgeeks.org)

1. Open the website and open selenium IDE. Copy the URL and paste it in the given space for further test. Then save & run the test to see the log files.

2. After every successful run it gives a message “completed successfully” with green text highlighted.

The screenshot displays the Selenium IDE interface for a project named 'Test2'. The main window shows the URL 'https://www.geeksforgeeks.org'. Below the URL, a table lists the test steps:

	Command	Target	Value
1	✓ open	/	
2	✓ click	css=.HomePageSearchContainer_homePageSe...	
3	✓ type	css=.HomePageSearchContainer_homePageSe...	Hello

Below the table, there are input fields for Command, Target, Value, and Description. A green progress bar indicates the test is complete. The status bar shows 'Runs: 1 Failures: 0'.

The Log tab at the bottom shows the following entries:

- Running 'Test2' 12:16:52
- 1. open on / OK 12:16:53
- 2. click on css=.HomePageSearchContainer_homePageSearchContainer_container_input__1LS0r OK 12:16:53
- type on
- 3. css=.HomePageSearchContainer_homePageSearchContainer_container_input__1LS0r with value Hello OK 12:16:54
- 4. click on css=.HomePageSearchContainer_homePageSearchContainer_heading__DhWmd OK 12:16:54
- 5. click on css=._3pxTop OK 12:16:54
- 6. click on css=._3pxTop OK 12:16:54
- 7. click on css=.index_homePageContainer__H8GJD OK 12:16:54
- 8. click on id=comp OK 12:16:55
- 9. click on css=.HomePageSearchContainer_homePageSearchContainer_heading__DhWmd OK 12:16:55
- 'Test2' completed successfully 12:16:55

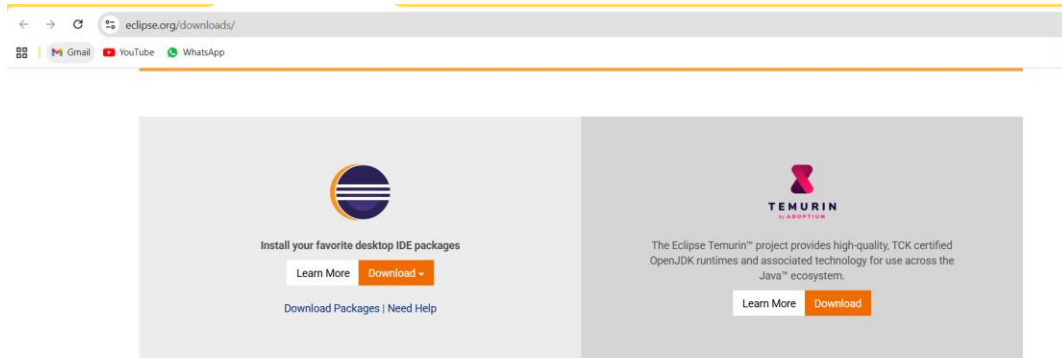

3. Save it in the HTML file and open it on your browser webpage.

```

Practical No 3

Aim: Install Selenium server and demonstrate it using a script in Java/PHP.

Steps: Go to URL- <https://www.eclipse.org/downloads/>

Select **Eclipse IDE for Java Developers** (Click on Windows 64 bit platform)

Next download the IDE

Download Selenium server: <http://seleniumhq.org/download/>

Download Selenium Client driver for Java (from Selenium Client Drivers section)

Selenium Standalone Server

The Selenium Server is needed in order to run Remote Selenium WebDriver. Selenium 3.X is no longer capable of running Selenium RC directly, rather it does it through emulation and the WebDriverBackedSelenium interface.

Download version [3.14.0](#)

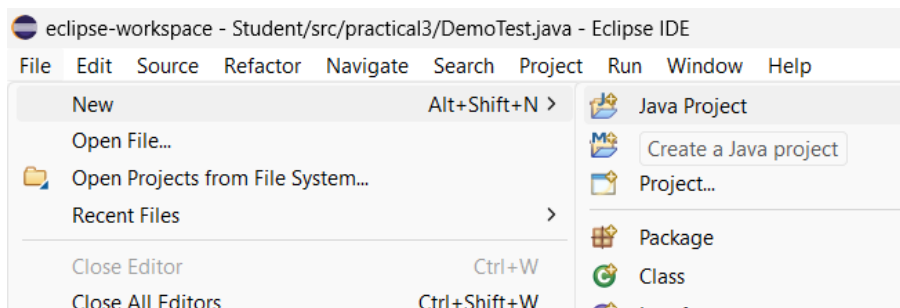

To run Selenium tests exported from the legacy IDE, use the [Selenium Html Runner](#).

To use the Selenium Server in a Grid configuration [see the wiki page](#).

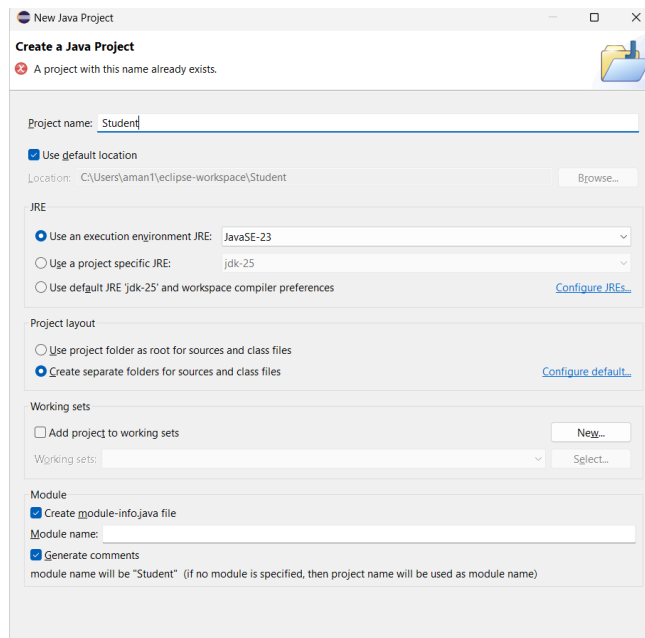

Name	Date
▼ A long time ago	
 selenium-server-standalone-3.141.59	16-0:
 geckodriver-v0.34.0-win64	14-0:

Go to Eclipse → Click File → New → Project (from various options need to select just “project”)

In Select Wizard → Click Java → “Java Project”

Now we are done with creation of project and need to configure the Selenium Client driver to this Project Right Click “Student” project

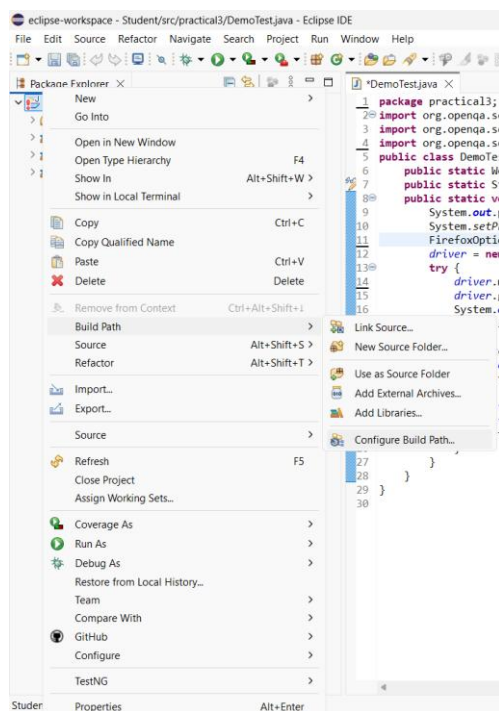

Click “Java Build Path”

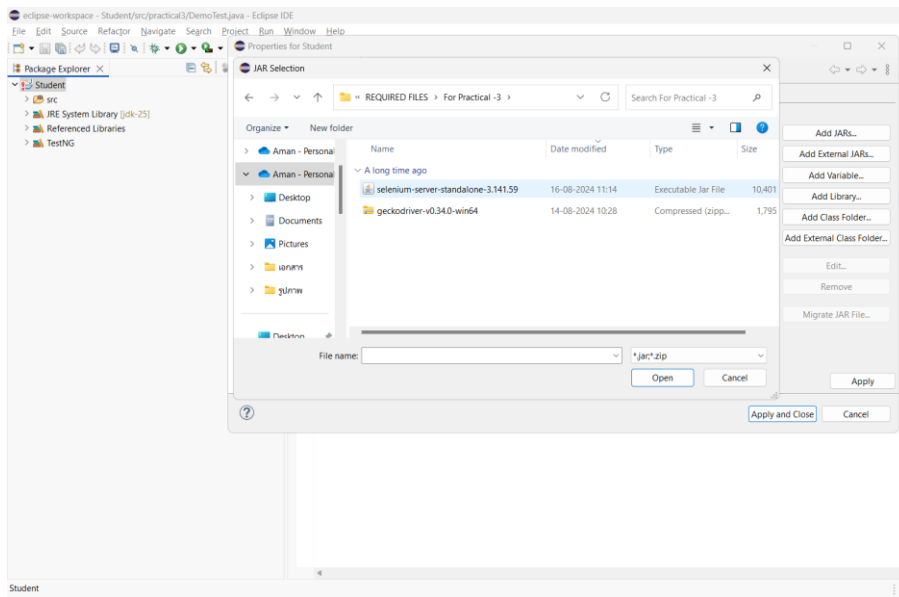

Click Libraries tab

Click “Add External JARs” button

Select “Selenium Client Drivers” unzipped in C:Selenium folder (Selenium

Server JAR file should not be added) Click OK

Program:

```
package practical3;

import org.openqa.selenium.WebDriver;
import org.openqa.selenium.firefox.FirefoxDriver;
import org.openqa.selenium.firefox.FirefoxOptions;

public class DemoTest {

    public static WebDriver driver;

    public static String geckoPath = "C:\\Users\\aman1\\OneDrive\\Documents\\geckodriver.exe";

    public static void main(String[] args) {

        System.out.println("Starting Selenium demo...");
        System.setProperty("webdriver.gecko.driver", geckoPath);
        FirefoxOptions options = new FirefoxOptions();
        driver = new FirefoxDriver(options);

        try {
            driver.manage().window().maximize();
            driver.get("https://www.facebook.com/");
            System.out.println("Page title: " + driver.getTitle());
            Thread.sleep(3000);

        } catch (Exception ex) {
            System.err.println("Error: " + ex.toString());
            ex.printStackTrace();
        } finally {
            if (driver != null) {
                driver.quit();
                System.out.println("Driver quit.");
            }
        }
    }
}
```

```
}  
}  
}  
}
```

Output:

```

Practical No 4

Aim: Write a program using Selenium WebDriver to automate the log in process on a specific webpage. Verify successful login with appropriate assertions.

Installation:

1. Run this command “pip install selenium” in cmd

```
C:\Users\RDNC>pip install selenium
Requirement already satisfied: selenium in c:\users\rdnc\appdata\local\packages\pythonsoftwarefoundation.python.3.11_qbz5n2kfra8p0\localcache\local-packages\python311\site-packages (4.25.0)
Requirement already satisfied: urllib3<3,>=1.26 in c:\users\rdnc\appdata\local\packages\pythonsoftwarefoundation.python.3.11_qbz5n2kfra8p0\localcache\local-packages\python311\site-packages (from urllib3[socks]<3,>=1.26->selenium) (2.2.3)
Requirement already satisfied: trio<0.17 in c:\users\rdnc\appdata\local\packages\pythonsoftwarefoundation.python.3.11_qbz5n2kfra8p0\localcache\local-packages\python311\site-packages (from selenium) (0.27.0)
```

2. To check installation run “pip show selenium” in cmd

```
C:\Users\RDNC>pip show selenium
Name: selenium
Version: 4.25.0
Summary: Official Python bindings for Selenium WebDriver
Home-page: https://www.selenium.dev
Author:
Author-email:
License: Apache 2.0
Location: C:\Users\RDNC\AppData\Local\Packages\PythonSoftwareFoundation.Python.3.11_qbz5n2kfra8p0\LocalCache\local-packages\Python311\site-packages
Requires: certifi, trio, trio-websocket, typing_extensions, urllib3, websocket-client
Required-by:
```

Program:

```
from selenium import webdriver
from selenium.webdriver.chrome.options import Options
from selenium.webdriver.common.by import By
from time import sleep
options=Options()
options.add_experimental_option("excludeSwitches", ["enable-logging"])
print("Testing started")
driver = webdriver.Chrome(options=options)
driver.get("https://www.saucedemo.com/")
sleep(3)
title=driver.title
print(f"Page title is {title}")
driver.find_element(By.ID, "user-name").send_keys("standard_user")
driver.find_element(By.ID, "password").send_keys("secret_sauce")
driver.find_element(By.ID, "login-button").click()
sleep(3)
first_item = driver.find_element(By.CLASS_NAME, "inventory_item")
assert first_item.is_displayed(), "First inventory item is not displayed"
first_item_name = first_item.find_element(By.CLASS_NAME, "inventory_item_name").text
print(f"First item name: {first_item_name}")
print("Test PASSED: Mr. RDNC, your LOGIN is successful and first inventory item is verified")
driver.quit()
```

Output:

Practical No 5

Aim: Write a program using Selenium WebDriver to update 10 student records in an Excel file. Perform data manipulation and verification

Program:

```
import java.io.File;
import java.io.IOException;
import jxl.Sheet;
import jxl.Workbook;
import jxl.read.biff.BiffException;
import jxl.write.Number;
import jxl.write.WritableSheet;
import jxl.write.WritableWorkbook;
import jxl.write.WriteException;
import org.testng.annotations.*;

public class Studentupdate {
    private static final String INPUT_FILE =
"C:\\Users\\aman1\\OneDrive\\Documents\\student_records.xls";
    private static final String OUTPUT_FILE =
"C:\\Users\\aman1\\OneDrive\\Documents\\student_records_updateds.xls";

    @Test
    public void testImportexport1() throws IOException, BiffException, WriteException {
        File inputWorkbook = new File(INPUT_FILE);
        Workbook w;
        try {
            w = Workbook.getWorkbook(inputWorkbook);
            Sheet s = w.getSheet(0);
            WritableWorkbook copy = Workbook.createWorkbook(new File(OUTPUT_FILE), w);
            WritableSheet sheet = copy.getSheet(0);
            int studentsAbove60 = 0;
            // Process data
            for (int i = 1; i <= 10; i++) {
                String studentStr = s.getCell(0, i).getContents();
                String marksStr = s.getCell(1, i).getContents();
                try {
                    int studentNumber = Integer.parseInt(studentStr);
                    int marks = Integer.parseInt(marksStr);
                    int updatedMarks = marks + 10;
                    // Update the marks in the same column
                    Number updatedMarksCell = new Number(1, i, updatedMarks);
                    sheet.addCell(updatedMarksCell);
                    // Check if the original marks are above 60
                    if (marks > 60) {
                        studentsAbove60++;
                    }
                }
            }
            System.out.println("Record successfully updated for student " + studentNumber + ": " +
marks + "-> " + updatedMarks);
        }
    }
}
```

```

    } catch (NumberFormatException e) {
System.out.println("Invalid data for student in row " + (i + 1) + ": " + studentStr +
", " + marksStr);
    }
}
// Write and close
copy.write();
copy.close();
w.close();
System.out.println("All records successfully updated");
System.out.println("Number of students who scored above 60 (before update): " +
studentsAbove60);
} catch (IOException | BiffException | WriteException e) {
e.printStackTrace();
}
}
}
}
}

```

Practical No 7

Aim: Write a program using Selenium WebDriver to provide the total number of objects present or available on a web page. Perform object identification and counting

Program:

```
package qqqqqq;
import java.util.List;
import java.util.concurrent.TimeUnit;
import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.WebElement;
import org.openqa.selenium.firefox.FirefoxDriver;
import org.openqa.selenium.firefox.FirefoxOptions;
import org.openqa.selenium.firefox.FirefoxDriverLogLevel;
public class llll {
    public static void main(String[] args) {
        System.setProperty("webdriver.gecko.driver",
            "C:\\Users\\aman1\\OneDrive\\Documents\\geckodriver.exe");
        FirefoxOptions options = new FirefoxOptions();
        options.setLogLevel(FirefoxDriverLogLevel.ERROR);
        options.addPreference("dom.webnotifications.enabled", false);
        options.addPreference("dom.push.enabled", false);
        options.addPreference("media.autoplay.default", 1);
        options.addPreference("privacy.trackingprotection.enabled", true);
        WebDriver driver = new FirefoxDriver(options);
        driver.manage().timeouts().implicitlyWait(30, TimeUnit.SECONDS);
        driver.get("https://wikipedia.com");
        List<WebElement> buttons = driver.findElements(By.tagName("button"));
        System.out.println("The number of buttons is " + buttons.size());
        List<WebElement> inputs = driver.findElements(By.tagName("input"));
        System.out.println("The number of input fields is " + inputs.size());
        for (WebElement button : buttons) {
            System.out.println("Button text: " + button.getText());
        }
        for (WebElement input : inputs) {
            System.out.println("Input type: " + input.getAttribute("type"));
        }
        driver.quit();
    }
}
```

Practical No 8

Aim: Write a program using Selenium WebDriver to get the number of items in a list or combo box on a web page. Perform element identification and counting.

Program:

```
package qqqqqq;
import java.util.List;
import java.util.concurrent.TimeUnit;
import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.WebElement;
import org.openqa.selenium.firefox.FirefoxDriver;
public class llll {
    @SuppressWarnings("deprecation")
    public static void main(String[] args) {
        System.setProperty("webdriver.gecko.driver",
"C:\\Users\\aman1\\OneDrive\\Documents\\geckodriver.exe");
        // Initialize FirefoxDriver
        WebDriver driver = new FirefoxDriver();
        String url = "https://wikipedia.com";
        driver.get(url);
        // Implicit wait
        driver.manage().timeouts().implicitlyWait(30, TimeUnit.SECONDS);
        try {
            // Locate a combo box (select element)
            WebElement comboBox = driver.findElement(By.cssSelector("select"));
            // Find all options in the combo box
            List<WebElement> options = comboBox.findElements(By.tagName("option"));
            System.out.println("Number of items in the combo box: " + options.size());
            for (WebElement option : options) {
                System.out.println(option.getText());
            }
        } catch (Exception e) {
            System.out.println("No combo box found on the page!");
        }
        // Close the browser
        driver.close();
    }
}
```

Output:

```
1759406025391 RemoteAgent WARN TLS certificate errors will be ignored for this session
